Park City Peaks Hotel

Tableau Project / Assignment

Park City Peaks Hotel provides hotel accommodation to tourists and business travellers.

Now, the hotel manager can get an excel spreadsheet that he downloads from the Hotel Booking Software.

He has given us the spreadsheet and would like to find the following insights in visualizations:

1. Bookings and Cancellations the hotel gets in a monthly basis.
2. Number of bookings by new or repeated guest.
3. The meal types the guests generally choose. Where BB is Bed and Breakfast, FB is Full Board, HB is Half Board and rest are considered as No Meals.
4. What are average number of bookings per adults, children, and babies.
5. Create a Dashboard for the above 4 task(worksheets) and give dashboard a title of "State of Park City Peaks Hotel as of August 2020". Also add the logo of the hotel near the title.
6. Add a dashboard filter on task 1 (chart) which should affect the rest of the charts.
